

Efficient Assembly Solutions for Solar Power Plants

CONNECT SERIES™ gives you the flexibility to control and program different torque tool. The INSIGHTConnect mobile application lets you log and monitor all your moments are 100% fulfilled – as you cut the time it takes to do the job.

- More precision
- More quality
- More traceability

Sun Tracker Units Assembly

**OXM Cordless
Torque Multiplier**

Sun Tracker Units rotate the structure towards the Sun in order to optimize the efficiency of PV cells. Generally the fastening requirements here are high torques due to the mechanics of these high-precision structures,

150Nm – 500 Nm bolt tightening

simple tools costs you time and money. What's more, an average 20% of bolts are overtightened, risking deformation of panels, structures and bolts... and even higher costs.

Ingersoll Rand QX Connect Precision Tools Solution

x5.3

times faster tightening

With torque control

Our solution:

QX precision tools with their torque control system and transducer are accurate to around 3% every single time. That means more quality and lower costs due to overtorque deformations, penalties and customer complaints.

ing

big problems in solar assembly from metallic structure deformation and failure to adding to reduced efficiency.

are they meet quality standards in three steps:

- thout torque control
- al torque meter
- prque meter

of bolts in the average array – and arrays free-stage, labour-intensive process means and increased cost.

INSIGHT™ CONNECT APP

The Insight Connect app is the easy way to boost quality assurance as you cut project delays and reduce the risk of penalties caused by quality issues.

Our FREE, user-friendly app is all you need to set up, train, audit and program every QX tool.

Available in Android & IOS

Compact PV cell tightening

Compact PV cells mean it can be hard to access bolts with standard assembly tools. Manual adjustment is time-consuming and fiddly, and can cause expensive damage.

Metallic structures are getting tighter and tighter – and traditional tools often have problems accessing joints.

That makes it tough to tighten bolts to the right torque levels, which means lost productivity and even structural deformations, which can cause big problems in the field.

addresses this – a metallic part helps you access even built torque system

The QX Connect Series™ gives you total, closed-loop control of the fastening process. This connectivity options means you can use it wherever there's a job to be done.

- **Flexibility** Use the same tool for multiple torque targets, and choose the right level of acceleration, free speed and shutdown speed to match the tool to any job.
- **Feedback** with visual and audio alerts when you need them
- **Accurate** Set torque accurate to around 3% (depending on application, tested to ISO 5393 standards)
- **Quality monitoring** Send data to a mobile app for easy access
- **Maintenance alarms** program the tool to alert you when it's time for service
- **Indicators** for maintenance, such as low battery or low torque
